(TS//SI//REL) Computer-Network Exploitation Successes South of the Border

FROM: [redacted]
Chief, NSA-Texas TAO/Requirements & Targeting (FTS327)
Run Date: 11/15/2010

TS//SI//REL) TAO-enabled collection against the Mexican Office of the President (project FLATLIQUID) has also been a lucrative source of SIGINT. In ate May 2010, TAO successfully exploited a key mail server in the Mexican PRESIDENCIA domain within the Mexican Presidential network to gain irst-ever access to President Felipe Calderon's public email account. The targeted domain, also used by the Mexican presidential cabinet, contained iplomatic, economic and leadership communications which continue to provide insight into Mexico's political system and internal stability. Collection rom FLATLIQUID accesses has provided reportable intelligence for several S2 product lines at both NSA/CSS Texas and Washington as well as SCS lexico City.

(TS//SI//REL) These TAO accesses into several Mexican government agencies are just the beginning -- we intend to go much farther against this important target. TAO, S2C (International Security Issues) and FTS2F1 (Southern Arc) are poised for future successes against our neighbor "south of the border."
